The method of Invention II is related to the product of Invention I(O) as a product and process of using. The inventions are distinct because the product can also be used for treatment of insecticide poisoning.

[illegible]

Art Unit: 1652

Inventions I(A)-(BBBBBBBBBBBBBBBBBBBBBBBBBB) are distinct because the products of Inventions I(A)-(BBBBBBBBBBBBBBBBBBBBBBBBBB) are physically and functionally distinct chemical entities.

Inventions II(a)-(vv) are independent because the methods of Inventions II(a)-(vv) comprise different steps, utilize different products and/or produce different results.

A search for more than one of Inventions I(A)-(BBBBBBBBBBBBBBBBBBBBBBBBBB) and II(a)-(vv) would be a burden on the Office for the following reasons.

Because the products of Inventions I(A)-(BBBBBBBBBBBBBBBBBBBBBBBBBB) are structurally and/or functionally distinct entities, a search for one said invention would not encompass a search for any other invention and searching all of Inventions I(A)-(BBBBBBBBBBBBBBBBBBBBBBBBBB), or a subset thereof would be a burden on the Office.

Because the methods of Inventions II(a)-(vv) comprise different steps, utilize different products, and/or produce different results, a search for one said invention would not encompass a search for any other invention and searching all of Inventions II(a)-(vv), or a subset thereof would be a burden on the Office.

A search for the product of Invention I(O) would not encompass a search for the methods of Inventions II, or vice versa, because said methods are not the only methods of making and/or using said product. Thus, a search of Invention I(O) with Invention II would be a burden on the Office.

A search for any one of the products of Inventions I(A)-(N) and (P)-(BBBBBBBBBBBBBBBBBBBBBBBBBB) would not overlap a search for any of the methods of Invention II, or vice versa, because said methods do not make or use said products. Thus, a search of any of

Art Unit: 1652

Inventions I(A)-(N) and (P)-(BBBBBBBBBBBBBBBBBBBBBBBBBBBBBB) with Invention II would be a burden on the Office.

These inventions are distinct for the reasons given above and have acquired a separate status in the art due to their recognized divergent subject matter, as shown by their different classification. Furthermore, as explained above, searching more than one invention would be a burden on the Office. Therefore, restriction for examination purposes, as indicated, is proper.

Restriction between product and process claims has been required. Where Applicant elects claims directed to a product, and the product claim is subsequently found allowable, withdrawn process claims that depend from or otherwise include all the limitations of the allowable product claim will be rejoined in accordance with the Official Gazette notice dated March 26, 1996 (1184 O.G. 86; see also M.P.E.P. 821.04, *In re Ochiai*, and *In re Brouwer*). Process claims that depend from or otherwise include all the limitations of the patentable product will be entered as a matter of right, if the amendment is presented prior to final rejection or allowance, whichever is earlier. Withdrawn process claims that are not commensurate in scope with an allowed product claim will not be rejoined. To be allowable, the rejoined claims must meet all criteria for patentability including the requirements of 35 U.S.C. 101, 102, 103, and 112.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
